Height: 30 inches

Spread: 24 inches

Spacing: 30 inches

Sunlight:

Hardiness Zone: (annual)

Description:

A wonderful variety perfect for containers or gardens; produces 4" long, dark green glossy fruit that mature to dark red; lovely crisp texture with a mild heat, ideal for roasting, stuffing or drying when mature

Edible Qualities

Poblano Pepper is an annual vegetable plant that is typically grown for its edible qualities, although it does have ornamental merits as well. It produces dark green peppers (which are technically 'berries') which are usually ready for picking from mid summer to early fall. The fruit will often fade to dark red over time. The peppers have a mild taste and a crisp texture.

The peppers are most often used in the following ways:

- Eating When Cooked/Prepared
- Cooking
- Drying
- Seasoning
- Sauces

Planting & Growing

Poblano Pepper will grow to be about 30 inches tall at maturity, with a spread of 24 inches. When planted in rows, individual plants should be spaced approximately 30 inches apart. This vegetable plant is an annual, which means that it will grow for one season in your garden and then die after producing a crop.

This plant can be integrated into a landscape or flower garden by creative gardeners, but is usually grown in a designated vegetable garden. It should only be grown in full sunlight. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It may require supplemental watering during periods of drought or extended heat. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This is a selected variety of a species not originally from North America, and it is considered by many to be an heirloom variety.

Poblano Pepper is a good choice for the vegetable garden, but it is also well-suited for use in outdoor pots and containers. With its upright habit of growth, it is best suited for use as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. It is even sizeable enough that it can be grown alone in a suitable container. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
