## Boxleaf Euonymus

*Euonymus japonicus 'Microphyllus'*

Height: 24 inches

Spread: 12 inches

Sunlight:

Hardiness Zone: 5b

Other Names: Japanese Spindle Tree

### Description:

Rich glossy dark green foliage is small with a fine appearance; seaside salt tolerance; a great low hedge plant with light dense branches that tolerate shearing for a small topiary, or leave to its natural shape; water more often in extreme heat

### Ornamental Features

Boxleaf Euonymus has attractive dark green foliage. The small glossy oval leaves are highly ornamental and remain dark green throughout the winter. Neither the flowers nor the fruit are ornamentally significant.

### Landscape Attributes

Boxleaf Euonymus is a dense multi-stemmed evergreen shrub with an upright spreading habit of growth. It lends an extremely fine and delicate texture to the landscape composition which should be used to full effect.

This shrub will require occasional maintenance and upkeep, and can be pruned at anytime. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Boxleaf Euonymus is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Topiary

## Planting & Growing

Boxleaf Euonymus will grow to be about 24 inches tall at maturity, with a spread of 12 inches. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH, and is able to handle environmental salt. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. This is a selected variety of a species not originally from North America.
